

Dmitry Uchakin

Security Automation & Detection Engineer

Location: London, UK

Phone: +44 7425693002

Email: dmitry.uchakin1@gmail.com

LinkedIn: <https://www.linkedin.com/in/dmitry-uchakin>

GitHub: <https://github.com/uchakin>

Global Talent Visa Holder (No sponsorship required)

Certifications:

- **AWS** - Cloud Practitioner
- Blue Team Level 1 (BTL1)
- Hunt APTs with Yara like a GReAT Ninja
- Try Hack Me profile
- Blue Team Labs profile
- **IBM** - QRadar Resilient (**SOAR**)

Engineering Focus:

- Security Automation Platform Engineering
- Detection Engineering
- AI-assisted Security Investigation

Skills:

• Security Automation:

SOAR Architecture & Orchestration (n8n, IBM Resilient, TheHive) • Python (boto3, pandas, requests) • API Integrations • Slack Apps

• Detection & Response:

Detection Engineering (Sigma, YARA) • SIEM Content Dev (Azure Sentinel, QRadar, Elastic, Splunk) • Threat Hunting • MITRE ATT&CK • EDR (CrowdStrike/SentinelOne/Sysmon)

• Elastic Stack:

Elasticsearch • Kibana • Logstash • Beats • ECS

• Cloud & Infrastructure:

AWS (IAM, CloudWatch, Lambda, VPC) • Docker • Kubernetes (Basic/Learning) • Linux • MacOS • Windows • Azure

• DevSecOps & AI:

Git • Terraform (DaC) • CI/CD for security • Prompt Engineering & LLM evals • Agentic Workflows

Education:

- Master's degree in Information technology security – Department of Information technology (2015-2020)

Languages:

- English - Advanced
- Russian - Native

TLDR:

Lead Security Automation & Detection Engineer with 8+ years of experience designing detection content and security automation across SIEM and EDR platforms. Expert in Detection-as-Code, LLM-augmented triage and ELK-based SIEM content development. Led automation teams and drove engineering culture adoption within SOC environments. Currently focused on applied AI in detection, building automated triage pipelines and ELK-based detection workflows.

Experience:

Senior Cybersecurity Engineer, Revizto

UK, London | April 2025 – Present

- **Detection-as-Code & SIEM Engineering:** Managed the end-to-end detection lifecycle in Azure Sentinel and CrowdStrike, treating detection logic as code. Engineered automated CI/CD pipelines using Terraform to deploy, tune, and maintain high-fidelity rules, routing all incidents to n8n for automated response.
- **AI-Assisted Investigation & Prompt Engineering:** Developed an automated triage pipeline using LLMs to reconstruct process trees for CrowdStrike alerts. Continuously prototyped, evaluated, and tuned system prompts to minimize AI hallucinations and drastically reduce manual triage time.
- **Automated Research:** Engineered a parallel software security analysis pipeline. Upon a user request, the system automatically executes checks across 7 different domains and delivers a comprehensive initial risk assessment report within minutes.
- **ChatOps & Incident Routing:** Architected an interactive incident management hub. Standardised alert notifications with custom enrichment logic and introduced one-click actions for immediate containment and automated ticketing directly from the chat interface.

Automation Team Lead, SecurityHQ

UK, London | October 2024 – June 2025

- Led the strategic migration from legacy IBM Resilient SOAR to n8n, completely decoupling our automation logic from the SIEM and reducing licensing overhead.
- Architected a multi-tenant automation framework handling incidents from 10+ QRadar consoles globally, ensuring high availability for cross-region synchronization.
- Introduced basic DevOps practices into the SOC: implemented Git-based version control for playbooks and mandatory code reviews for security automation.
- Defined the automation roadmap and presented quarterly progress to senior leadership

Senior Automation Engineer, SecurityHQ

UK, London | November 2023 – September 2024

- Developed end-to-end incident handling workflows using Python and low-code platforms, fully automating repetitive Tier-1 tasks.
- Built custom API integration layers to connect legacy SIEM platforms with modern ticketing and messaging infrastructure.
- Tuned detection rules and standardized the Detection-as-Code approach to ensure high-fidelity triggers for downstream automation.

SOC Manager, CyberO

Angola, Luanda | May 2023 – April 2024

- Architected full-spectrum SOC operations and Incident Response protocols for major financial clients, defining log visibility requirements and escalation paths from scratch.
- Designed custom detection logic tailored specifically to regional threat landscapes and banking infrastructure.

Senior Security Operations Centre Analyst, Kaspersky

Moscow | Feb 2019 – May 2023

Progression: Intern → Junior → Senior. Focused on APT hunting and complex incident investigation.

- **Advanced Threat Hunting:** Led investigations into sophisticated APT campaigns and targeted attacks, utilizing memory forensics and network traffic analysis to uncover hidden adversaries.
- **Detection Engineering:** Developed and tuned complex detection logic based on analysis of new malware strains and threat intelligence reports, directly contributing to the global detection database.
- **Incident Response Automation:** Scripted Python utilities to automate evidence collection and initial artifact parsing, reducing the routine workload for the L1 team.
- **Mentorship & Training:** Onboarded and mentored **10+ analysts**, creating internal training tracks on Windows Forensics and Malware Analysis.
- **Process Improvement:** Redesigned the incident lifecycle for critical alerts, ensuring standardized response procedures for high-severity incidents.

Early career experience:

Security Advocate & Technical Advisor (Community Role), Vulners

Remote | March 2020 – Present

- Engineered a Docs-as-Code ecosystem (Git/MkDocs) for the Vulners API, treating documentation as version-controlled engineering artifacts.
- Led technical product development, translating enterprise requirements into concrete platform features.
- Authored 100+ technical deep-dives on vulnerability trends, driving product strategy and educating a monthly audience of 5,000+ security professionals.

Quality Assurance Automation Engineer, Infowatch

Moscow | April 2017 – February 2019

- Developed automated testing frameworks (Python) for DLP endpoints, ensuring stability of security agents on Windows/Linux.
